BAA Motor Transport Dept

Customer: BAA Motor Transport Department
Product: PCS23 Mobile Smartwasher
Sector: Airport Maintenance
Contact: Richard Jennings
Replaced: Solvent Washer

The PCS23 Smartwasher™ has proved to be the ideal substitute for solvents on site at both Heathrow and Stansted Airports. The decision to change to bio-remediating cleaning technology was straight forward for the management team. Increasing concerns over Health and Safety ensured that BAA reviewed its existing practices. As a conscientious employer BAA provide staff with all the relevant safety equipment but experience showed that enforcing the wearing and use of this around hazardous solvents could not always be guaranteed.

BAA found the introduction of the Smartwasher™ helped them to achieve their Health and Safety objectives immediately. Easy to use, efficient, kind to the user and a cost effective option, Smartwasher™ fits the organisational objectives well, and additionally supports the company's policy to reduce their Carbon Footprint.

The biggest benefit to BAA is not initially the most obvious - because of high security airside the unique bio-remediating technology of the Smartwasher™ means that there is no requirement for contractors to visit site on maintenance runs. This also overcomes the timely issue of contractors having to be escorted by BAA company staff onsite. This benefit has made the Smartwasher™ a very attractive option for airside companies.

BAA is the world's leading airport company. Its work includes looking after security, property management, retail, fire services and cargo and making sure these operations run smoothly. Throughout BAA it aims to minimise its environmental impact and to be one of the leading companies in corporate responsibility.

Bioremediation Overview

Bioremediation is the earth's natural 'recycling' technology – the processes have evolved over millions of years, and involve the steady breakdown of organic waste matter and its conversion into simple essential substances. The process is the work of many billions of naturally occurring Micro-organisms that use organic waste as their food and energy source.

Rozone's range of 'Bioremediating' technologies take these naturally occurring processes, and simply speed them up so that they are commercially useful. Our patented 'SmartWasher' system applies these principles to parts cleaning and allows users to clean 'naturally' and safely, rather than using the man-made alternative of petrochemical based solvents. Many of our other biological products work on a similar basis, allowing our range of 'Sustainable Solutions' to provide health, safety and environmental benefits to customers and users across the world.
